GitHub: github.com/BILGEOZCAN

Technical Skills

- **Programming Languages:** Python, C++, Java, C#, JavaScript, MATLAB, SQL, Bash
- **Frameworks & Libraries:** OpenCV, TensorFlow, PyTorch, Keras, Scikit-learn, NumPy, Pandas, Spring Boot, .NET
- **Artificial Intelligence & Machine Learning:** Machine Learning, Deep Learning, Convolutional Neural Networks (CNNs), Computer Vision, Natural Language Processing (NLP), Model Training and Evaluation, Feature Engineering, Prompt Engineering
- **Tools & Platforms:** Git, GitHub, Linux, Docker, Jupyter Notebook, VS Code, PyCharm, Visual Studio
- **Methodologies & Practices:** Agile, Scrum, Software Development Life Cycle (SDLC), Risk Management, Version Control, Test-Driven Development (TDD)

Professional Experience

EPAM Systems **May 2025 – Present**
Junior Software Engineer ·Izmir, Turkey
- I contributed to the development of a serverless travel agency application using Python, AWS Lambda, API Gateway, Cognito, and DynamoDB.
- I implemented authentication and authorization features, created automated tests, updated OpenAPI documentation, and collaborated with the team through Jira, GitLab, and code reviews.

SMART Solar Technologies **January 2023 – August 2025**
Intern · Izmir, Turkey
- I developed deep learning models using PyTorch and was involved in all stages of the pipeline, including data preparation, model training, and model evaluation.

Istanbul University **July 2022 – January 2023**
Intern · Istanbul, Turkey
- I contributed to the development of image processing–focused modules using Python and C++.
- By optimizing real-time object detection, segmentation, and filtering processes with OpenCV, I achieved up to a 30% performance improvement.
- I trained classification algorithms using TensorFlow-based CNN models and performed hyperparameter optimization.

TNC Group **February 2022 – July 2022**
Intern · Istanbul, Turkey
- I gained proficiency in methodologies required to actively contribute to the initiation, planning, execution, and evaluation phases of projects.
- I acquired hands-on experience in teamwork, problem-solving, organization, and process improvement.

Projects & Competitions

TEKNOFEST 2024/2023 – Finalist
- I achieved 7th place in the “Agricultural Technologies” category.
- I developed a video processing pipeline using OpenCV, enhancing the system’s real-time analysis capabilities.

TUBITAK Project
- I served as the project lead for the project, managing project planning, task allocation, technical coordination, and progress tracking.
- I contributed to the development of an AI-powered modular UAV system for detecting trapped living beings and early-stage forest fires using thermal imaging and YOLO-based object detection.

BAP Project
- I contributed to the development of a YOLOv8-based intelligent traffic management system and worked on deep learning models for real-time vehicle detection, classification, and traffic density analysis.

Publications

"Strawberry Ripeness Detection: Optimizing Harvesting Efficiency with YOLOv11"
Authors: Tahsin Soyak, Nur Bilge Özcan, Gökalp Çınarer
Publisher: IEEE
Conference Date: May 23–24, 2025
DOI: 10.1109/ICHORA65333.2025.11017268

Languages

- Turkish – Native
- English – Advanced / Fluent

Education

Bachelor’s Degree in Computer Engineering
Yozgat Bozok University, Türkiye 2022 – 2026
GPA: 3.10 / 4.00

Volunteer Experience & Affiliations

- Microsoft Student Ambassador
- Member, Google Developer Groups (GDG)
- Instructor & Mentor, T3 Foundation
- Student Quality Evaluator, YÖKAK
- President, Computer Engineering Student Society, Yozgat Bozok University
- Quality Ambassador, Quality Society, Yozgat Bozok University
